# CRM APPLICATION TO HANDLE THECLIENTSAND THEIR PROPERTY RELATED REQUIREMENTS

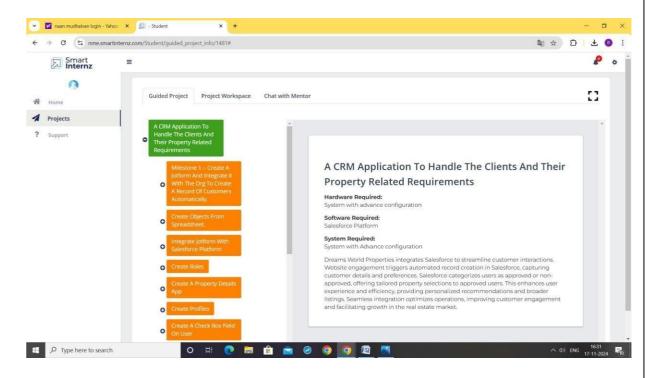

#### 1. PROJECT OVERVIEW:

This projectfocuses on developing a CRM application using Salesforce, enhanced with JotForm integration, to manageclients and their property-related requirements. The solution streamlines client interactions, centralizes property data, and automates workflows. JotForm is utilized for collecting client data through customizable forms, which integrate seamlessly into Salesforce to ensure accurate and efficient data processing.

#### 2. PROJECT OBJECTIVES:

- CentralizedDataManagement.
- WorkflowAutomation.
- SeamlessDataCollectionvia JotForm.
- EnhancedClientInteraction.
- ScalabilityandSecurity.
- Enhancecustomersatisfactionthroughefficientdatacollectionandcommunic ation.

#### **FIGURE1:**

#### 3.KEY FEATURES AND CONCEPTS:

- Apex Triggers: Automated logic to synchronize account data, esuring accuracy in client details and property preferences.
- Custom Objects and Fields: Designed for client and property data storage and management.
- **JotForm Integration:** Enabled efficient data collection through user-friendly forms, directly populating Salesforcerecords.
- Process Builder and Workflows: Automated property matching and email notifications based on data received from JotForm.
- **Process Builder**: Designed workflows to match properties to client requirements automatically.
- **Reports and Dashboards**: Provided actionable insights on property trends and client activities.
- Role-BasedAccessControls:Ensured data security and privacy.

#### 4. DETAILED STEPS TO SOLUTION DESIGN:

- **Custom Object Creation:** Created objects for clients, properties, and transactions with appropriate fields.
- **Integration with JotForm:** Linked JotForm to Salesforce for automatic client data import.
- Workflow Automation: Developed workflows using Process Builder to match properties with client requirements and send alerts.
- **UI Customization:** Designed user-friendly layouts and Lightning components form an aging data efficiently.
- **Security Implementation:** Applied profiles, roles, and sharing rules to protect sensitive client and property data.
- **Testing:** Conducted unit, system, and user acceptance testing to valid a workflows and integrations.

#### **5. TESTING AND VALIDATION:**

- Unit Testing: Verified individual components like Apex triggers and workflows.
- **System Testing:** Ensured seamless integration of JotForm and Salesforce workflows.
- User Acceptance Testing (UAT): Gathered feedback from test users to refine the system.
- **Performance Testing:** Ensured scalability under increased client and property data loads.

## 6.KEY SCENARIOS ADDRESSED BY JOTFORM AND SALESFORCE INTEGRATION:

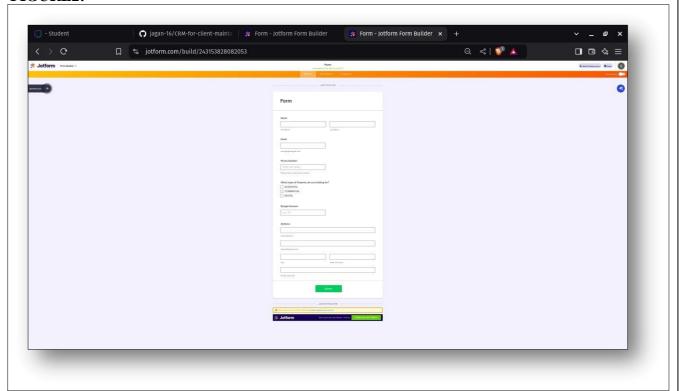

- **Efficient Client Management:** Centralized client profiles with detailed property preferences an dinteraction.
- Automated Property Matching: Leveraged automation to match client requirements with suitable properties instantly.
- **Real-Time Updates:**Enabled clients to receive updates on property availability and transaction status.
- **Streamlined Data Collection:** Used JotForm for error-free and efficient data input directly into Salesforce.
- **Insights and Analytics:** Dashboards offered key metrics like property availability trends and client activity.

#### 7. STEP BY STEP PROCESS EXPLANATION:

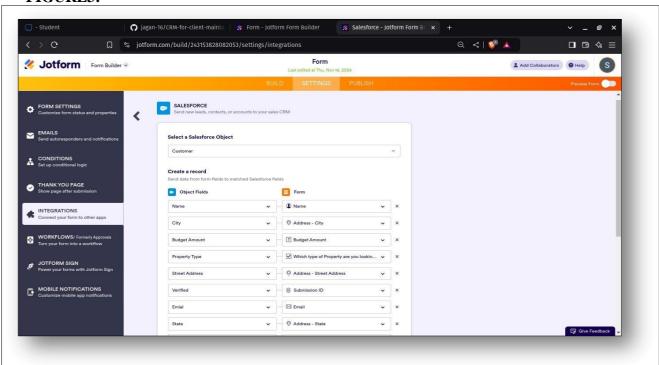

## STEP 1: CREATE A JOTFORM AND INTEGRATE IT WITH A ORG TO CREATE A RECORD OF CUSTOMERS AUTOMATICALLY

Client wants a form for the customers to get the details directly into the salesforce so that the admins can create a user in the org.

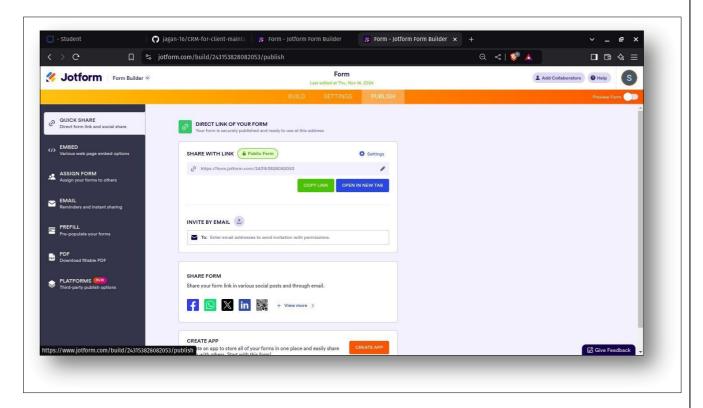

#### **FIGURE2:**

#### **FIGURE3:**

#### **FIGURE4:**

#### STEP2:CREATE OBJECTS FROM SPREADSHEET.

Directly Creating Objects from Spreadsheet in Salesforce.

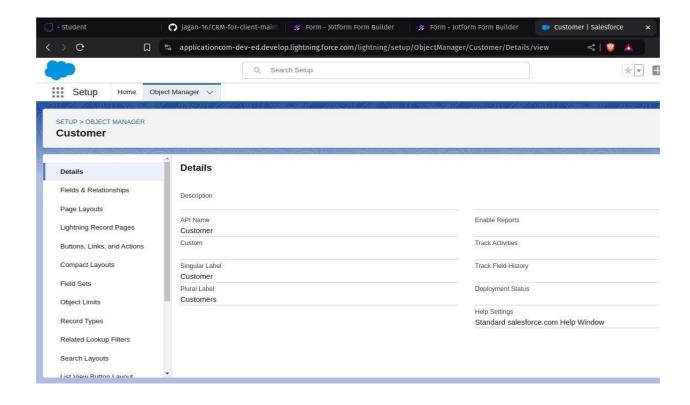

#### **Create Customer object**

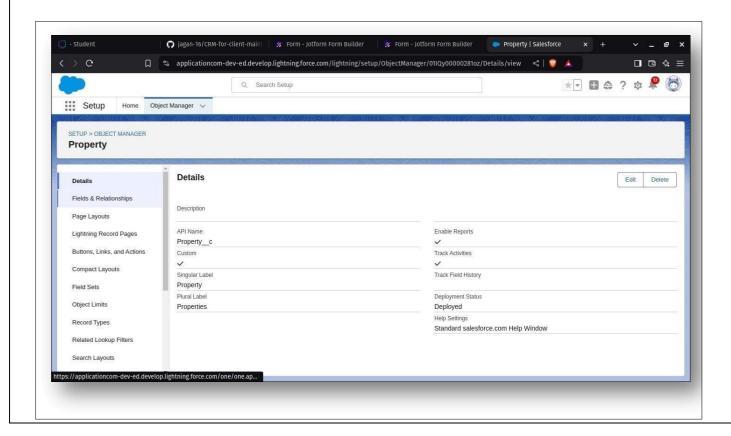

- Go to your object manager and and click on create object from spreadsheet.
- Click on the link to get the spreadsheet
- customer
- After downloading, upload the file, map the fields and upload tocreateanobject.

#### **Create Property object**

- Follow the same from the customer object to create the Property Object
- Property

#### **FIGURE5:**

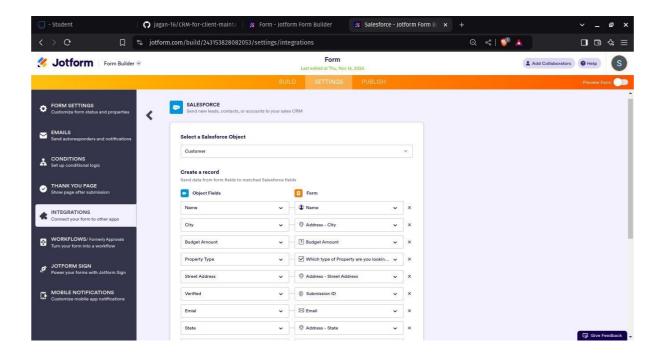

#### STEP 3: INTEGRATE JOTFORM WITH SALESFORCE PLATFORM

In this Milestone we are going to integrate jotform with Salesforce

#### **FIGURE6:**

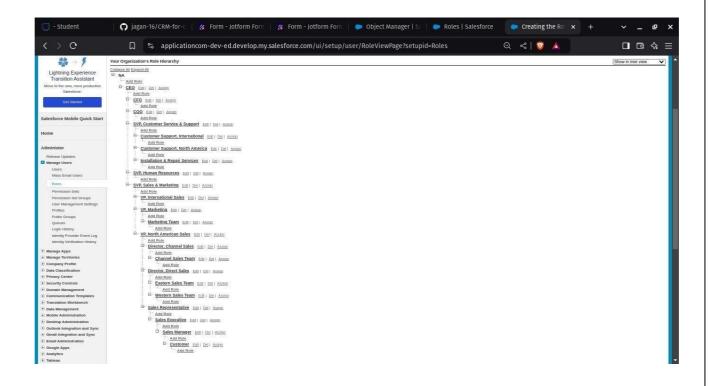

#### **STEP4:CREATE ROLES**

Create Roles as per business requirenment Steps:

- Go to Setup and Click on Roles, then click on Expand all and Add a Role just below the Sales Representative. \* It will use the "System Administrator Profile".
- Label-Sales Executive
- Reports to -Sales Representative
- Similarly Create a Role Name "Sales Manager" below Sales Executive which reports to Sales Executive, Also Add a Role below SalesManager labeled as "Customer" which reports to SalesManager.

#### FIGURE7:

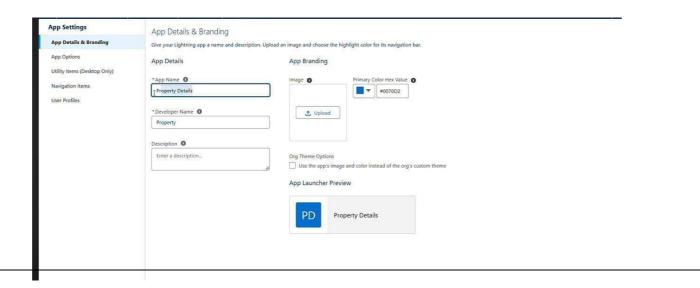

#### STEP5:CREATE A PROPERTY DETAILS APP

An App where the objects will be displayed Steps:

- From Setup>> Go to App Manager and click on New Lightning Appand Name it as "Property Details" and add "Customer" and "Property" Object.
- Click Next >> Next>> Save and Add "System Admin" Profile.

#### **FIGURE8:**

#### **STEP6: CREATE PROFILES**

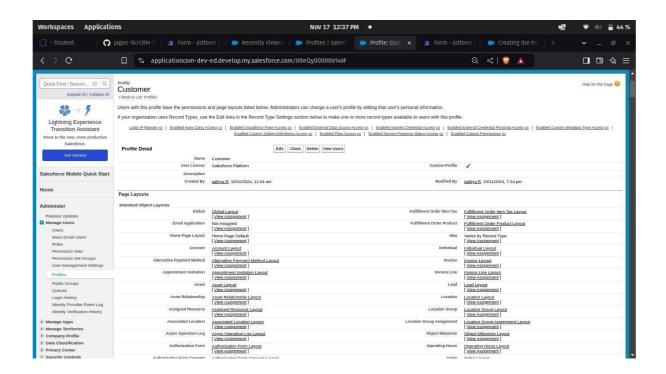

Create profiles as per business requirement

#### **Customer:**

#### **Steps:**

- From Setup >> Go to Profiles and Clone Salesforce Platform User and Name it "Customer".
- Uncheck all the Custom Objects and Check only Property Details From Custom App Settings.
- Also Remove all the Standard Object Permissions.

#### FIGURE9:

#### Manager:

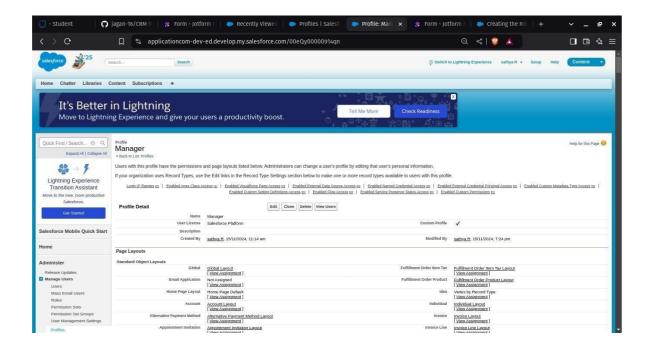

#### **Steps:**

- 1. From Setup>> Go to Profiles and Clone Salesforce Platform User and Name it "Manager"..
- 2. Uncheck all the Custom Objects and Check only Property Details

From Custom App Settings.

- 3. Also Remove all the Standard Object Permissions.
- 4. Uncheck all the Custom Object Permissions and check only "modify all" from "Property" and "Customer"

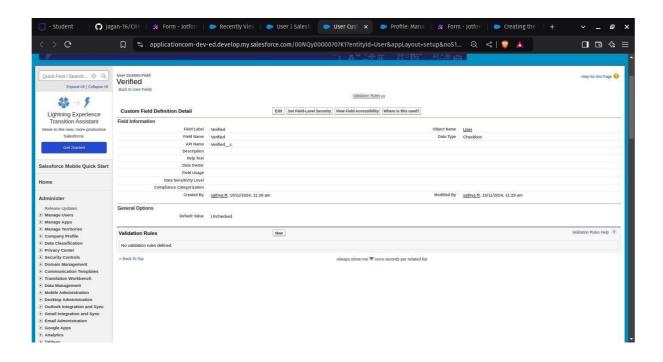

#### FIGURE10:

#### STEP7:CREATE A CHECKBOX FIELD ON USER

Create Field on the User as per the business requirement.

#### FIGURE11:

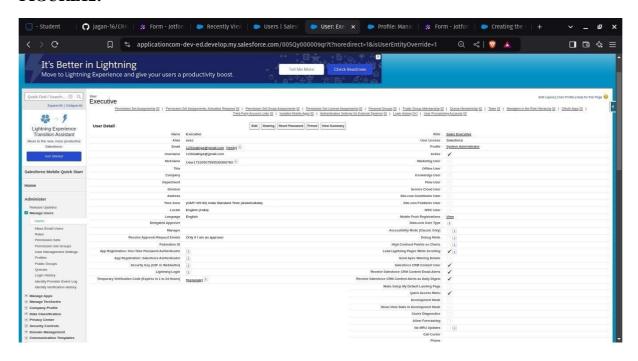

#### **STEP8:CREATE USERS**

#### **USER1:**

- GotoSetup-->Administration--> Users-->NewUser
- LastName- Executive
- Role-SalesExecutive
- License-Salesforce
- Profile System Administrator
- 6.Save

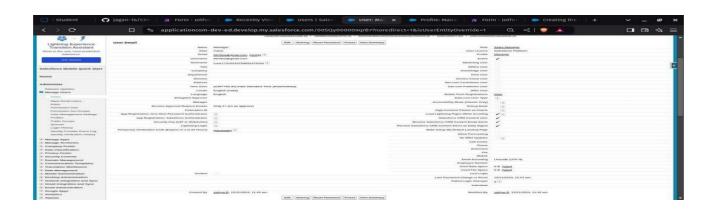

#### FIGURE12:

#### **USER2:**

- GotoSetup>>Administration>>Users>>NewUser
- LastName>>Manager
- Role>>SalesManager
- License>>Salesforce Platform
- Profile>>Manager
- Save

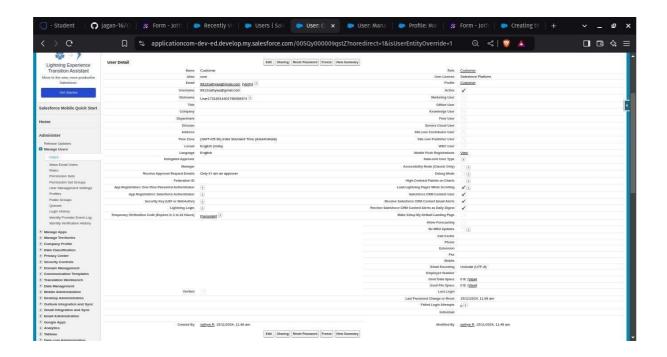

#### FIGURE13:

#### **USER3:**

- Goto Setup>>Administration>> Users>>New User
- Last Name>> Customer
- Role>> Customer
- License>>Salesforce Platform
- Profile>>Customer
- Make Sure the verified check box is "Unchecked"
- Save

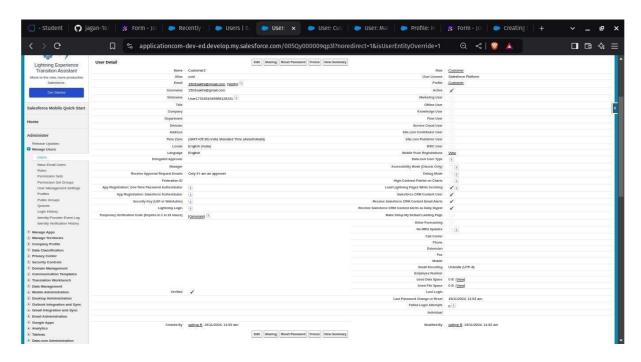

#### FIGURE:14

#### **USER4:**

- Goto Setup>>Administration>>Users>>New User
- Last Name>>Customer2
- Role>>Customer
- License>> Salesforce Platform
- Profile>>Customer
- Make Sure the verified checkbox is "checked"

#### FIGURE15:

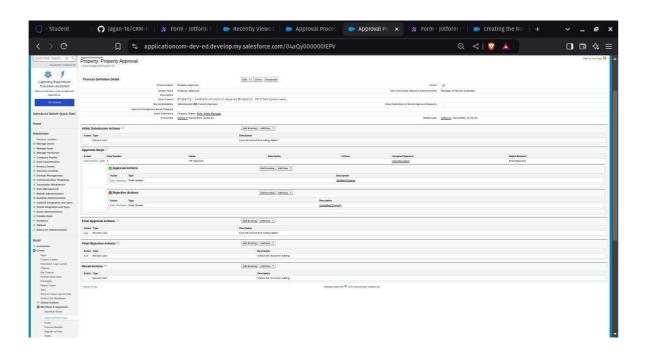

#### STEP 9: CREATE AN APPROVAL PROCESS FOR PROPERTY OBJECT

#### **Steps:**

- From Setup>>Process Automation>>Approval Process
- Process Name -PropertyA pproval
- Location is not equal to blank
- Verified Equals false.
- Click next and "Next Automated Approver Determined By Select Manager.
- From Record Edit ability Properties>>Click on
- Administrators OR the currently assigned approver can edit records during the approval process.
- From Step 5 Select Fields to Display on Approval Page Layout select Property, Owner, Location, Type.
- Click Next and Select the initial Submit
- Owner>>Property Owner
- Roles>>Sales Manager
- Save
- Add an approval step name "Executive Approval".
- Specify the Criteria >> All record should enter.

- click next and select the Approver as "Sales Executive" and "Save".
- Add One field Update as "UnVerified Property" Select Object>>Property
- Field to Update >> Verified Field DataType>>CheckBox
- Select CheckBox Option as "False" Save.
- Add One field Update as "UnVerified Property" Select Object>> Propert Field to Update>>Verified
- Field Data Type >> CheckBox
- Select CheckBox Option as "False"
- Activate the approval process

#### FIGURE16:

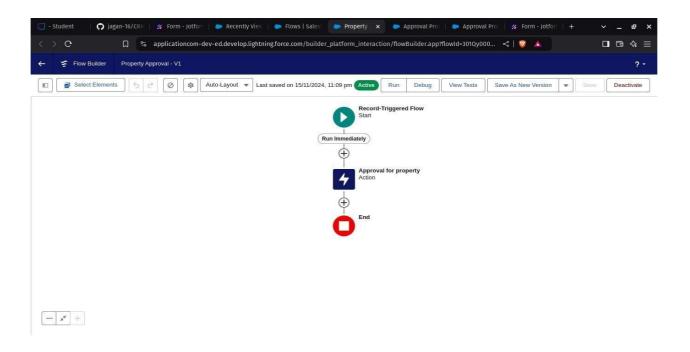

### STEP10:CREATE A RECORD TRIGGER FLOW TO SUMBIT THE APPROVAL PROCESS AUTOMATICALLY

A flow that can submit the records directly for approval

#### **Steps:**

- From Setup >> Search for Flows >> Click On New and Select "RecordTriggerFlow".
- Select Object>>Property
- Select "Trigger the flow when >> "A record is created"
- Set Entry Conditions>> "None"
- Add a "Action" >> "Submit for Approval"
- Give Label >> Approval for property
- Record Id>> {!\$Record.Id}
- Done
- Save the Flow and Give label as "Property Approval" and "Activate".

#### FIGURE17:

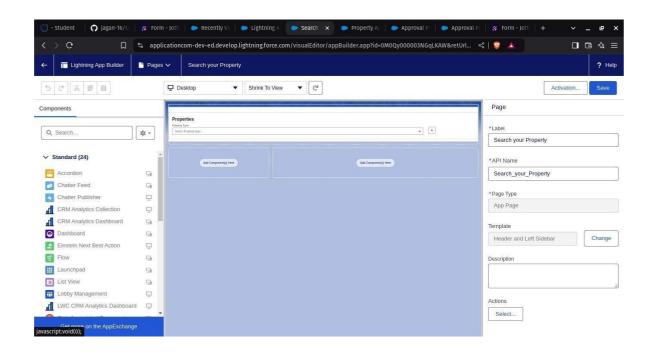

#### STEP11: CREATE AN APP PAGE

Create an App Page on the Property detailsObject named as "Search Your Property"

#### **STEPS:**

- From Setup>>Go to Lightning App Builder>>Click on New>> Select App Page and Click on Next.
- Give Label as "Search your Property" click "Next".
- Click "header and Left Sidebar" and Click on "Done".
- Click on "Save" and then click on "Activate".
- From Page Setting select page activation as "Activate for all Users".
- From Lightning Experience Click on "Property Details" and click on Add Page.
- Then click on Save.

#### FIGURE18:

#### STEP12: CREATE A LWC COMPONENT

Create an LWC Component for the customers so that only verified customers can access the verified properties and non Verified customers can access non verified properties, and deploy it on "Search your Property Page"

#### **STEPS:**

```
1.Create an Apex Class and make it aura enabled and name it "PropertHandler_LWC"
```

#### **CODE:**

```
public class PropertHandler_LWC{
    @AuraEnabled(cacheable=true)

public static list<Property_c> getProperty(string type , boolean verified){
    return [SELECT Id, Location_c, Property_Name_c, Type_c, Verified_c FROM Property_c Where Type_c =: type AND Verified_c =: verified];
    }
}
```

#### **CODE:HTML**

```
lightning-button-icon variant="neutral" icon-
   name="standard:search"alternative-text="Search"
          label="Search"onclick={handleClick}></lightning-button-icon>
         </div>
        </div>
       </div>
      </div>
<template if:true={is true}>
       <div class="slds-box">
        lightning-datatable key-field="id" data={property
   list}columns={columns}></lightning-datatable>
       </div>
     </template>
     <template if:false={is false}>
       <div class="slds-box">
       <div style="font-size:15px;"><b>No properties Are Found!!</b></div>
     </div>
     </template>
     lightning-card>
   </template>
 In Your Js File Write this code:
CODE:JS
   import{LightningElement,api,track,wire}from'lwc';
   import getProperty from
    "@salesforce/apex/PropertHandler_LWC.getProperty"import{ getRecord}
   from'lightning/uiRecordApi';
   importUSER_IDfrom'@salesforce/user/Id';
   export default class C_01_Property_Management extends LightningElement
      {@apirecordId
     userId =
     USER_ID; verified
     vartypevar
     isfalse =
     true;istrue=fal
      se;
```

@track propertylist =

```
[];columns=[
  {label:'PropertyName',fieldName:'Property_Namec'},
  {label:'PropertyType',fieldName:'Typec'},
  {label: 'PropertyLocation', fieldName: 'Locationc'},
  {label: "Propertylink", fieldName: "Property_linkc"}
]
propetyoptions=[
  {label:"Commercial", value: "Commercial"},
  {label:"Residential", value: "Residential"},
  {label:"rental", value: "rental"}
@wire(getRecord, { recordId: "$userId", fields:
['User.Verifiedc'] })recordFunction({data,error}) {
  if (data)
     {console.log(data
    console.log("This is the User Id --->
    "+this.userId);this.verifiedvar=data.fields.Verifiedc.
    value;
  } else {
    console.error(error)console.log('th
    isiserror')
}
changehandler(event)
  {console.log(event.target.value);this.typevar
  =event.target.value;
handleClick(){
  getProperty({type:this.typevar,verified:this.verifiedvar})
    .then((result) =>
       {this.isfalse =
       true; console.log(res
       ult)
       console.log('This is the User id ---> ' +
       this.userId);console.log('This is the verified values ---> ' +
       this.verifiedvar);if(result !=null&&result.length!= 0) {
         this.istrue =
         true;this.propertylist =
         result; console.log(this.verified
         var);console.log(this.typevar)
       } else {
         this.is false =
         false;
         this.is true=false:
```

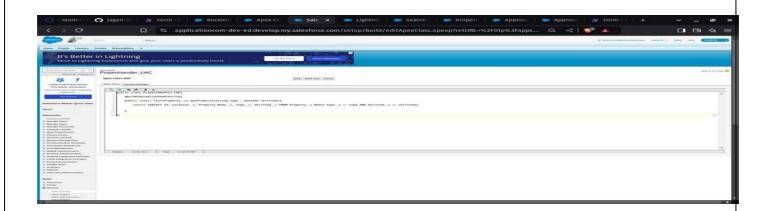

```
})
.catch((error) =>
    {console.log(error)}
})
}
```

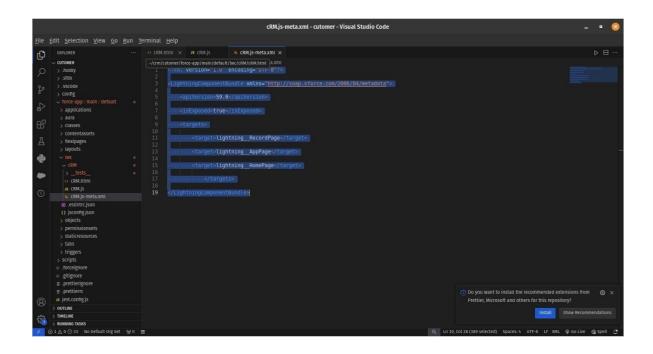

In Your meta file give your targets to deploy the component.

#### **CODE:**js-meta.xml

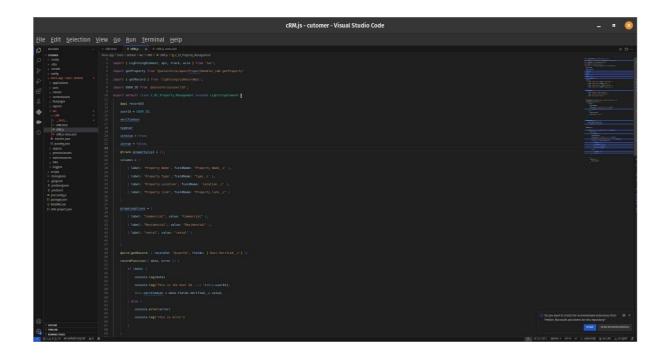

After Saving all the three Codes, Right Click and deploy this component to the org.

#### FIGURE19:

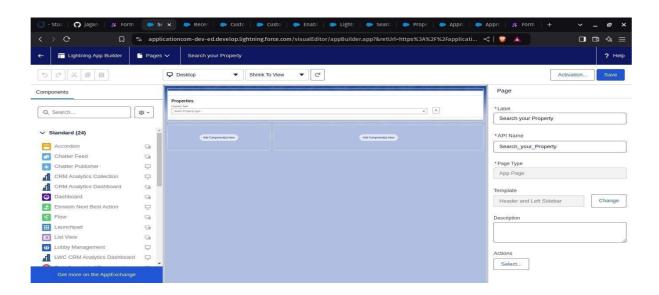

#### STEP13:DRAG THIS COMPONENT TO YOUR APP PAGE

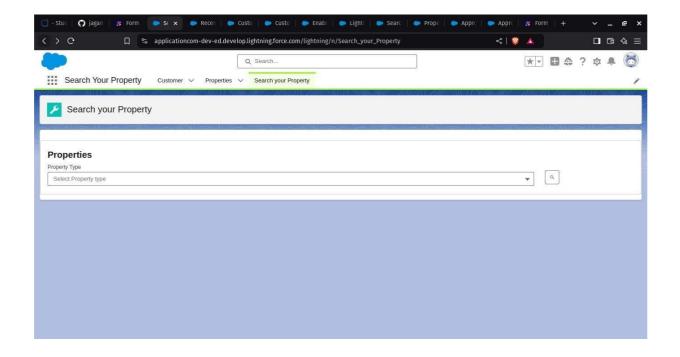

Adding the component to your page.

#### **STEPS:**

- From Setup>>Go to App Launcher>>Search for Property Details
- On this Page click on gear icon and clickon Edit Page
- Drag the Component to your App Page and Save the Page.

#### FIGURE 20:

#### STEP14:GIVE ACCESS OF APEX CLASSES TO PROFILES

The Apex Class has a Security, Enable the security for the profiles that needs to access this class.

#### **STEPS:**

- From Setup >> Search For Apex Classes >> Click on "Security" behind "PropertyHandlerLWC".
- From Profiles Add "Manager" and "Customer" and "Save".

#### 8. Conclusion

The CRM Property Management System successfully combines Salesforce and JotForm to address the complexities of managing client and property-related workflows. By centralizing data, automating processes, and enhancing communication, this solution has improved operational efficiency and client satisfaction. It is scalable, secure, and tailored for future business growth, making it an ideal tool for property management enterprises.
